

## How to back up KD Max library.

KD Max V4 has a library modify function that allow users to modify the system library. If the user makes any mistakes in modification, such as deleting a cabinet , it can not be recovered. So, we suggest that users back up the library data before doing modifications to it.

The data is in the path: KDMax/kitdat/, and its name is YF\_Catalog.Lib. Users just need to copy one and save it into another folder. If users want to recover the library, they just need to copy the back up file and replace the modified one.

The screenshot shows a Windows Explorer window titled 'kitdat' with the address bar set to 'E:\KDMax\kitdat'. The main pane displays a list of files and folders. The file 'YF\_Catalog.Lib' is highlighted with a red box. The 'Details' pane on the left shows the folder's name and modification date: 'kitdat', 'File Folder', 'Date Modified: Friday, July 03, 2009, 12:15 PM'. The status bar at the bottom indicates '674 objects (plus 1 hidden)', '25.0 MB', and 'My Computer'.
