

Troubleshooting Guide: ODBC Error

After installing YFCAD Software, few computers will show the notification: "The ODBC driver of Access not found, Can't Link to database!"

This problem is caused by Windows itself. It prevents the ODBC driver from writing the registry. This situation will only appear on Windows XP. If Windows system is installed on the C Drive , then please use the ODBC01.reg and ODBC02.reg files to write the ODBC driver to registry. Please double click the reg files to install.
